EXPERIENCE

Reddit Image Search

<https://sudonut.github.io/reddit-search/>

- Reddit Image Search is a web application that allows the user to input the name of a subreddit and generate images for viewing
 - Images display dynamically as the user scrolls, creating an “infinite” scroll until the user decides to change the search term
- The client side is built in HTML, CSS, and JavaScript, while also utilizing the Reddit API to make fetch requests for images

Weather Clock

<https://sudonut.github.io/weatherclock/>

- A website that displays the user’s current time zone along with the current weather in their area
- Utilizes the Open Weather API which allows the end user see the current weather in their area
- Motivational quotes are displayed on the client side and will change every time the user either refreshes the page or by clicking a button that generates a new quote

IP Address Tracker

<https://sudonut.github.io/ip-tracker/>

- The IP Address Tracker displays the current IP Address, Location, Time zone, and current ISP of a given domain entered by the user
 - Users are able to see this data due to the IP Geolocation API which will fetch information about a given domain or IP
- This website uses the Leaflet JavaScript library which displays an interactive map, when the user searches for a domain or IP address. The map will update and place a pin on the exact location of where that domain/IP is being hosted
